Acoustic Zoo:

Intro to Arduino

Acoustic Zoo presents *Intro to the Arduino*

Thursday, November 5th. 7-10PM
Lambton Studio A.
FREE

The Arduino is an inexpensive micro processor that is commonly used to LEDs, connect sensors, and motors to a laptop, allowing for interactive installations, music, and multimedia artwork.

We will be holding a series of workshops over the coming months for people interested in learning how to use these devices. This first session will introduce the Arduino, the circuitry, and the software needed to create interactive art works, and will feature demonstrations of a few simple projects.
