

This codebook is divided into six sections: (a) NSSE Core (the main survey questions), (b) Engagement Indicators (scale values derived from sets of items), (c) Survey Weights (values used adjust the proportional responses to population parameters), (d) Data Provided by Your Institution (variables used for weights and other institutional records), (e) Data Related to Survey Administration (metadata related to survey procedures), and (f) Appendix of major fields.

Survey questions are listed in the order that students received them. Response options appear in italics beneath. Variable names appear in brackets (e.g., [askquest]) after each item. Items that are recoded (e.g., reversed response values) or derived (new computed values such as age category or total number of written pages) from original question(s) are shaded and prefaced by a bracket and the word "RECODED" or "DERIVED."

NSSE codebooks correspond to the final data we deliver in the summer and contain information on variables (EIs, recodes, derived variables, etc.) not included in the raw data files available for download in the spring. Like NSSE data, codebooks are subject to revision until the Institutional Report is delivered in August.

Other Scales

In addition to the Engagement Indicators, NSSE items can be grouped into other measures for supplemental analysis. These scores are also calculated for each student and range from 0 to 60. For more detailed information about how these are calculated, visit the NSSE website at <https://nsse.indiana.edu/nsse/working-with-nsse-data/syntax/index.html>

Sense of Belonging [sb]

Level of agreement that students feel comfortable being themselves, valued by, and like part of the community at their institutions. Items 15a-c: sbmyself, sbvalued, sbcommunity

Perceived Gains [pg]

The degree to which students reported having made gains in a variety of personal, practical, and general education competency areas as a result of their undergraduate education. Items 18a-j: pgwrite, pgspeak, pgthink, pganalyze, pgwork, pgothers, pgvalues, pgdiverse, pgprobsolve, pgcitizen

Survey Weights

NSSE creates weights for randomly selected and census-administered first-year and senior respondents based on institution-reported enrollment status (part-time/full-time) and sex. Use weights to replicate the frequency column percentages. However, we encourage schools interested in intra-institutional weighting to consider a more sophisticated weighting system that takes into account response rate differences among additional student subpopulations. NSSE's weights are not appropriate for intra-institutional comparisons in most cases as the response rate differences among subgroups may not be the same as the ones that exist institution-wide at your school. Both weights listed below will reproduce your institution's report statistics, but the N's will differ. See NSSE's website for a full discussion about this topic at <https://nsse.indiana.edu/nsse/reports-data/weighting.html>

Weight 1 [WEIGHT1]

Institution-reported sex and enrollment status for first-year and senior students within an institution. Replicates the original number of respondents for each institution and is used to produce frequency statistics for each institution.

Weight 2 [WEIGHT2]

Institution-reported sex and enrollment status weight up to population for first-year and senior students within an institution. Multiplies the number of respondents to match the institution's overall population size.
